WhatTON: /noche "This mutation regults in a nucleotide
WHATTON: alteration at position 2555 of the native Tag DNA
SMATTON: polymerase uncleotide sequence of G to A. This mutation
SMATTON: conservative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                replace(193, "t")

Teplace(193, "t")

Teplace(193, "t")

This mutation changes the nucleotide

THANTION: at position 193 of the native fag DNA polymerase from

THANTION: C to T. resulting in an amino acid change of Arg to Cy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TROOMATION: object(9), "g", "INLS mutation results in a nucleotide IRROBMATION: Anotes" "This mutation results in a nucleotide IRROBMATION: a literation at postion 89 of the naily of and INROBMATION: polymerase nucleotide sequence of C to G."
